

Steam Sauna Automatic Scent Dispenser System

The Steam Sauna scent dispenser is used to inject fragrance into the steam line, which creates a refreshing feeling in the steam room and prevents odor build up. Steam Sauna’s scent pump can be interlocked with the steam unit to inject fragrance whenever steam is being produced. This will save fragrance and prevents waste when steam is not required, in comparison to scent pumps that inject scent uninterrupted. Also, the amount of scent that is injected is widely adjustable through an electronic control.

Operating Flow Rate	25-100 microliters/minute
Interlock with Steam Unit	Yes
Operating Temperature	32-105°F (0 to 40°C)
Humidity	90%
Dimensions	5.3" x 5.5" x 7.5"
Weight	4.1 lbs.
